EXPERIENCE

Technical Lead

Ubisoft - For Honor

 Dec 2022 - Present

 Montreal, Canada

- Leads technical direction for 15+ For Honor live online services across PC, PlayStation, and Xbox, spanning backend architecture, service reliability, production operations, and game-client integration
- Guides technical designs, reviews critical changes, mentors engineers, and supports incident response for live services
- Coordinates online-service work across gameplay, UI, tools, DevOps, QA, and production stakeholders
- Designed and coordinated For Honor's cross-progression transition (PC, PlayStation, Xbox) across backend services, game-client integration, data migration, first-party certification, release planning, and live operations for all active accounts with no major launch regressions
- Improved service configuration, testing, and deployment pipelines to make six-week client updates and more frequent backend deployments safer and more repeatable
- Contributed to player safety and game security initiatives, including anti-cheat integration, client-side hardening, and backend abuse mitigation

Online Developer

Ubisoft - For Honor

 Sep 2016 - Dec 2022

 Montreal, Canada

- Built and maintained multiple backend services supporting For Honor's live online experience
- Delivered features across player progression, inventory, rewards, matchmaking, ranking, and game-client integration
- Designed, maintained, and tuned matchmaking, skill rating, and ranking systems for live multiplayer populations
- Contributed to the post-launch migration from P2P networking to dedicated servers by integrating AWS GameLift into the matchmaking stack and porting the dedicated server from Windows to Linux

Online Developer

Ubisoft - Rendez-Vous

 Jul 2015 - Sep 2016

 Montreal, Canada

- Developed a web service and companion website to create, deploy, configure, and manage online servers for Ubisoft games (Python, AngularJS)
- Built self-service provisioning workflows for game servers and databases in private clouds (OpenStack, Chef, Windows, Linux)

SUMMARY

Technical lead and senior engineer specializing in live multiplayer online systems, with nearly 20 years of software development experience and 10+ years delivering and operating For Honor's online services. Deep experience across backend architecture, game-client integration, dedicated servers, reliability, release operations, and production incident response.

Leads technical direction across engineering, design, production, QA, DevOps, and security stakeholders. Known for turning complex online-system changes into shippable plans across PC, PlayStation, and Xbox live environments.

TECHNOLOGIES & SKILLS

Online Games

- Game Services Design
- Live Operations
- Game Security
- Service Reliability
- Release Pipelines
- Incident Response
- Matchmaking
- Cross-Progression
- Dedicated Servers

Infrastructure

- Kubernetes
- Docker
- Linux
- AWS GameLift
- ArgoCD

Data & Observability

- MongoDB
- Redis
- MySQL
- Elasticsearch
- Prometheus
- Grafana
- Kibana

Tools & Pipelines

- Git
- Perforce
- GitLab CI/CD
- CMake
- Build Systems

Programming

- Python
- C++
- JavaScript

EXPERIENCE

Freelance Full Stack Developer

ETAI

📅 Feb 2014 - Aug 2014 📍 Antony, France

- Prototyped a web application for entering and annotating complex data (jQuery, JavaScript, CSS, Java EE)
- Maintained web applications and modernized deployment processes (Pyramid, Java EE, Salt, Linux)

Freelance C++ Developer

BNP Paribas

📅 Mar 2013 - Feb 2014 📍 Paris, France

- Built low-latency C++ components for equity derivatives trading, high-frequency automation, and click trading
- Focused on options market making for Eurex and Liffe, with support for traders, releases, and validation

Software Engineer, R&D

Syllabs

📅 Feb 2009 - Dec 2012 📍 Paris, France

- Designed and implemented a high-performance C++ text mining language and compiler/interpreter for linguists (Boost/STL, GNU flex/bison)
- Built distributed web mining, scraping, and API platforms serving millions of requests per day (Python, Pyramid, Django, Redis, MySQL, MongoDB, Riak)
- Created internal monitoring dashboards and contributed to research projects involving machine learning and NumPy

EDUCATION

Computer Science Engineer

EPITA

📅 2009 📍 Paris, France

- Major in Cognitive Sciences and Advanced Computer Science

Research Master's degree

Paris Nanterre University

📅 2009 📍 Nanterre, France

- Major in Natural Language Processing

LANGUAGES

French Native

English Fluent
